

## Blade removal with Quik Link III attachment

**NOTE:** Low mount lift frame is shown in picture. For removal of Quik link III HI DLC follow same procedure.

1. Locate a spot that is as level as possible. With the blade positioned at 90° to the truck lower the blade and leave the switch in the float position.
2. Insert the jack into the receiver on the lift frame and lower the leg while holding and pulling slightly on the spring loaded handle, until the handle pulls out easily and locks in place. NOTE: If the jack is lowered too far it will "wedge" the lift frame into the spreader bar. Lock the handle in the open position and secure with the safety pin down through the handle.
3. Unplug the lights, power unit and battery cables from the truck.
4. Back the truck away from the plow assembly. It may be necessary to accelerate the truck back with a quick "snap" in order to allow the truck to break free from the plow.
5. Return control to neutral or shut off switch. Install dummy plugs into harnesses.

## Blade reinstall with Quik Link III attachment

**Warning:** Before traveling be sure that pins, all bolts and spring are in place. Safety pin must be in place and locked all the time.

**NOTE:** Low mount lift frame is shown in picture. For reinstall of Quik link III HI DLC follow same procedure.

1. Drive up to plow assembly until spreader bar is about to make contact with lift frame.
  2. Get out of truck to check that the lift frame is aligned with the spreader bar. If necessary use jack to adjust the height or move truck to align sideways.
  3. Drive truck forward until you start to push the plow.
  4. With plow fully engaged, pull out the safety pin on the spring loaded handle and let it fully engage the pins in place, and reinsert the safety pin to lock the handle. Remove the jack.
  5. Remove dummy plugs and reconnect battery cables, power unit and lights.
- NOTE:** Aligning the truck to the plow is made easier by establishing a reference point on the hood of the truck to line up the lights on the plow.
